Put it on the waste, not on your
waist

Project by: Susan Njeri Githaiga

- Designer
- Developer

PROBLEM STATEMENT

Though it's not always simple, eating a healthy, balanced diet helps people feel better both physically and mentally. Many people face barriers to healthy eating, including not enough time, cost, a lack of understanding combined with conflicting information around nutrition, and taste preferences.

SOLUTION

I plan to create a React App that fetches nutrition data from a public API and provides nutrition information to users.

This App will enable people to access nutrition information about their diet, at their own time of convenience

Development Process

Stage 1:

Ideation & Research

Stage 3:

Coding & Merging

Stage 2:

Design & Prototyping

Stage 4:

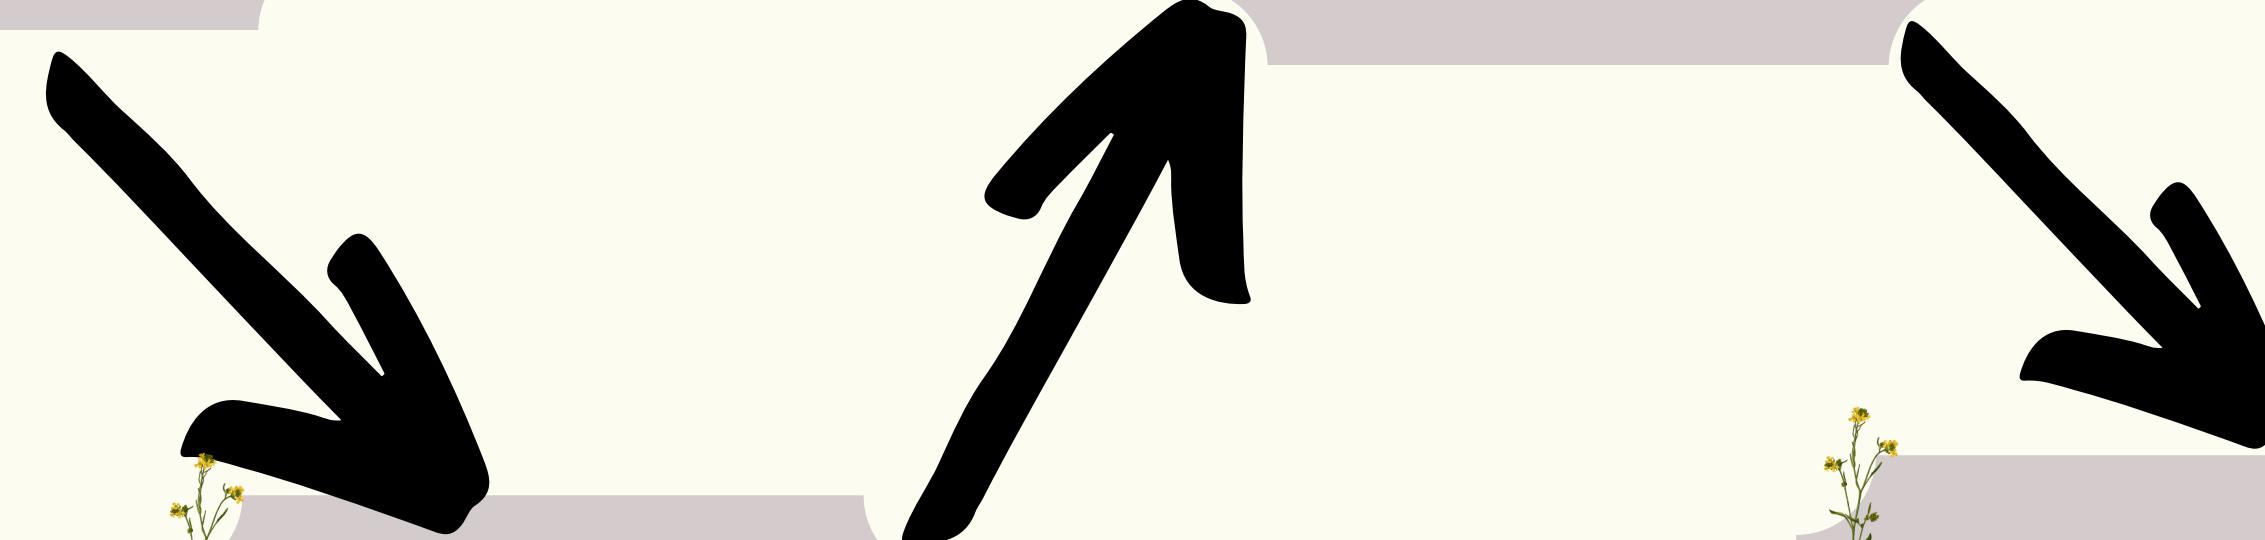

Development

Data Flow Diagram

1. Landing
Page

3.

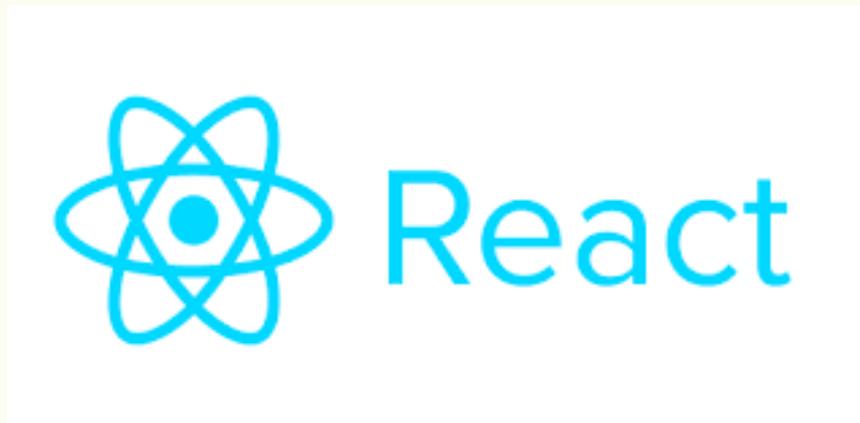

4.

MVP's

- Landing Page
- External API (Magical Task)
- Tourist destination links (React routerlink)
- Use of json-server

Tech stack

CHALLENGES FACED

- Finding the right public API for the project
- Setting the design

FUTURE PLANS

- Looking for project investors.
- Incorporate local Kenyan foods into the App.

Any questions?
